OUTLOOK AND STRATEGY

Market Review. The JP Morgan Asia Credit Index (JACI) Philippines gained 1.17% in March as Philippine dollar-denominated bonds tracked movements in US Treasuries.

Global bond yields declined in early March as the US Federal Reserve's latest summary of projections points to three policy rate cuts in 2024. In addition, US Fed Chair Jerome Powell said that he still expects cuts this year. However, the yield declines were tempered by mixed economic data and rising oil prices in the latter part of the month. Unemployment rate rose from 3.7% in January to 3.9% in February, with wage growth falling from 4.5% to 4.3%. On the other hand, February US consumer price index (CPI) inflation rose by 3.2%, above the 3.1% median estimate. Consequently, the 10-year US Treasury benchmark yield dropped from 4.25% in end-February to as low as 4.07%, before closing the month at 4.20%.

On the domestic front, inflation rose from 2.8% in January to 3.4% in February, bucking the downtrend since September 2023. The February figure was also significantly higher than the 3.0% median forecast of economists. Inflation was mainly driven by food, with rice prices increasing by 23.7% YoY. According to the BSP, inflation risks have receded but remain tilted to the upside. These risks include higher transport charges, electricity rates, oil, and domestic food prices amidst a strong El Niño phenomena.

Fund Performance. The Fund returned 0.33% for the month, outperforming its benchmark by 6 basis points. Year-to-date, return amounted to 0.50%, underperforming its benchmark by 39 basis points.

Fund Strategy. The fund will maintain its current duration. Investors in the bond fund must be prepared to withstand short-term volatility as higher investment value is normally achieved over the medium- to long-term.
