OUTLOOK AND STRATEGY

Market Review. Consumer prices rose in line with expectations at 4.7% in February largely due to surging food prices and rising crude oil costs. The sharp rise in COVID-19 cases locally prompted the Philippine government to once again put NCR and nearby provinces under “enhanced community quarantine” from March 29 until April 4, 2021, with many expecting an extension. Philippine economic recovery lags its peers, with various financial institutions predicting 5%-6% growth vs the government’s 6.5%-7.5% GDP target.

In its March 25 meeting, the Bangko Sentral ng Pilipinas left the key policy rate unchanged at 2% as expected and revised their inflation forecasts to 4.2% (prev. 4.00%) for 2021 and 2.8% (prev 2.7%) in 2022. BSP Gov. Diokno maintains that it is too early to talk about the unwinding of stimulus measures and is confident that inflation will move back within the 2%-4% target range in the second half of this year. Month-on-month, the local government securities yield curve is steeper with yields higher by 34bps on average, led by the 7 to 15 year securities.

The Bureau of the Treasury priced the new 3 yr retail treasury bond RTB 3-11 at 2.375% and sold Php 463.318 Bn worth of bonds in the primary offering this month. Market players continue to park excess cash in Philippine Treasury Bills, with yields at auctions rising about 20-40 bps across 91-day, 182-day, and 364-day tenors due to rising inflation expectations. The BTr also reissued Php 30 Bn of the 7yr paper FXTN 10-61 with 4.75% coupon at an average rate of 3.732% and Php 30Bn of the 10yr paper FXTN 10-65 with coupon 2.875% at an average rate of 4.614%, both at the higher end of market expectations.

Fund Performance. The Fund returned -0.30% for the month, underperforming its benchmark by 27 basis points. Year-to-date, return amounted to -0.32%, underperforming its benchmark by 25 basis point.

Fund Strategy. The fund will maintain its liquidity and current duration. Investors in the bond fund must be prepared to withstand short-term volatility as higher investment value is normally achieved over the medium- to long-term.
