OUTLOOK AND STRATEGY

Market Review. The Philippine Stock Exchange Index (PSEi) got off to a hot start in 2024. The early-year optimism, fueled by the prospects of potential rate cuts, has propelled risk assets to gain traction. Further bolstering this is the encouraging local macroeconomic data, which has boosted investor sentiment. Notably, December inflation data came in lower at 3.9% from November's 4.1% and below consensus estimates of 4.0%. In addition to that, 4Q2023 Philippine GDP growth was recorded at 5.6%, exceeding market expectations of 5.2%.

Against this backdrop, the PSEi concluded January at 6,646.44, marking a 3.04% month-on-month return.

Trading activity surged, with the average daily turnover registering at US\$104 mil or 16.6% month-on-month. Foreign investors opened the year as net buyers at positive US\$80 million in January with observable preference for big cap liquid names primarily holding firms and banks.

In terms of stock performance, the top three gainers for the month include: BLOOM (+13.62%), GTCAP (+12.80%) and MBT (+11.31%). Meanwhile, the bottom three performers were: NIKL (-11.68%), MER (-9.27%) and URC (-5.67%).

The BPI Government Bond Index returned -0.18% in January as the local yield curve bear steepened, rising 13 basis points (bps) on average. Average daily trading volume for the month amounted to PHP20.98 billion higher than December's PHP15.48 billion with trades mostly seen on the long end of the curve.

The Bureau of the Treasury (BTr) held four FXTN auctions in January, all of which are new issuances. The 3-year FXTN 03-30, 5-year FXTN 05-78, 7-year FXTN 07-71, and 10-year FXTN 10-72 were priced at coupon rates of 6.000%, 6.125%, 6.125%, and 6.250%, respectively. In addition, with the tender bids reaching more than PHP100 million, the BTr offer tap issuances for the 7-year and 10-year papers, awarding PHP5 billion each.

In the local space, December headline inflation fell sharply to 3.9% year-on-year from previous month's 4.1%. Despite the December figure being the slowest print since February 2022, average inflation for 2023 concluded at 6%, which is still above the BSP's target range of 2% to 4%. The slowdown was mainly driven by easing inflation from most commodity groups such as housing, water, electricity, gas, and other fuels. Although price pressures are starting to ease, the BSP noted the unlikelihood of cutting policy rates for the first half of the year due to risks of supply shocks, consistent with the tones of the FED and other central banks.

Fund Performance. The Fund returned 1.37% for the month, underperforming its benchmark by 9 basis points. Year-to-date, return amounted to 1.37%, underperforming its benchmark by 9 basis points.

Fund Strategy. The Fund will continue to be defensive, but also opportunistic, as volatility could persist given thin market liquidity and as interest rates remain elevated. The Fund will focus on companies with leading market capitalization.

For the fixed income portion of the fund, the Fund will look to lengthen the fund's duration as interest rates are expected to decline towards the second half of the year. Though inflation has moved within the government's target range, the BSP remains vigilant in monitoring supply side pressures and potential second-round effects. Volatility though, may persist in the global space, and the portfolio will be actively managed to take advantage of this.
