## OUTLOOK AND STRATEGY

**Market Review.** Philippine government bond prices initially recovered in April following the sharp selloff in March. However, gains were later reversed, with yields ending the month broadly unchanged.

The early decline in yields was driven by improving global sentiment, particularly after reports of a ceasefire between the US and Iran, which led to a sharp drop in oil prices. Brent crude fell from around \$118 per barrel to as low as \$90. However, this improvement proved temporary as negotiations stalled, causing oil prices to rebound and weigh on market sentiment.

Locally, bond yields were pressured higher following further monetary tightening by the Bangko Sentral ng Pilipinas (BSP). The policy rate was raised from 4.25% to 4.50%, alongside upward revisions to inflation forecasts. The BSP also signaled the possibility of additional rate hikes, contributing to the bond selloff late in the month.

During the period, the Bureau of the Treasury raised PHP 115 billion through regular bond auctions, below its PHP 120–140 billion target. This was due to the government choosing to accept fewer bids as bond yields continued to rise.

The Philippine Stock Exchange Index (PSEi) declined as continued Middle East tensions—particularly the conflict involving the US and Israel against Iran—persisted in weighing on investor sentiment. The prolonged conflict continued to have spillover effects on the global economy, most notably through elevated oil prices.

With the BSP raising policy rates and inflation outlook higher after the March CPI breached the 2-4% BSP target range, the Philippine peso came under renewed pressure, breaching the ₱61-per-dollar level during the month.

Against this backdrop, the PSEi ended April at 5,833.64, representing a 1.9% month-on-month decline.

Market activity remained subdued, with Average Daily Value Turnover declining to Php6.055 billion, down 6.52% from the previous month. Foreign investors likewise remained net sellers, registering US\$211 million in net outflows for the month, further dampening market sentiment.

On a per stock basis, the top three index gainers for the month include: MER (+5.59%), MBT (+5.51%) and PGOLD (+4.63%). Meanwhile, the bottom three performers were: CNPF (-18.57%), PLUS (-15.02%) and JFC (-10.52%).

**Fund Performance.** The Fund returned -0.43% for the month, outperforming its benchmark by 21 basis points. Year-to-date, return amounted to -2.80%, underperforming its benchmark by 128 basis points.

**Fund Strategy.** The Fund will continue to be defensive given heightened volatility from geopolitical tensions. The Fund's preference is for companies with leading market capitalization, clear earnings growth drivers, dividend-paying and high-yielding.

For the fixed income portion of the fund, the Fund will maintain its overweight position in terms of duration as the BSP is expected to continue lowering policy rates in 2025.
