## OUTLOOK AND STRATEGY

**Market Review.** Global equity markets tumbled in December as hawkish rhetoric from central banks and mounting risks of a global slowdown continued to dominate headlines. November US annual headline inflation was softer-than-expected at 7.1%, supporting a slower pace of monetary policy tightening. The Federal Reserve raised its interest rates by 50 basis points in their December meeting, after four consecutive 75 basis point hikes. Despite the slower pace of rate hikes, the central bank remained committed and has indicated that it will keep interest rates higher for longer than expected to bring down inflation. Markets sold off amid concerns about weaker economic data, downside earnings risk and continued hawkish Fed rhetoric. Meanwhile, emerging market equities outperformed broader equity markets as China relaxed its stringent COVID policies. China's health commission released new measures to move the country towards reopening, driving a rebound in Chinese equities as investors banked on its economic reopening. The MSCI ACWI Information Technology Index lagged broad equity markets, returning -7.8% for the month. Within technology, all sub-sectors returned negative performance over the month, with hardware as the worst performing sub-sector.

**Fund Performance.** The fund returned -4.98% in December, lagging the benchmark by 107 basis points. Security selection within the hardware sub-sector detracted from performance.

**Fund Strategy.** We view the current market environment as favoring quality and value, driven by expectations of higher interest rates, higher inflation, slowing economic growth and geopolitical instability. The fund increased its exposure to stable and quality stocks, adding more defensive characteristics to the portfolio in the midst of a broader volatile market. For 2023, the technology sector is expected to remain challenged in the earlier part of the year as rate hikes and weaker-than-expected earnings will likely remain as headwinds for the sector. The second half of the year is expected to be more favorable for technology stocks on the back of peaking interest rates and potentially stronger earnings compared to conservative expectations. The companies within the portfolio continue to be underpinned by compelling fundamentals and powerful long-term secular growth drivers. The secular growth trends driving technology are multi-year transformations that are expected to persist, regardless of the macroeconomic environment or geopolitical risk. The fund will continue to focus on these long-term secular themes such as artificial intelligence, cloud computing, electric vehicles, metaverse and quantum computing.
