OUTLOOK AND STRATEGY

Market Review. The BPI Money Market Index returned 0.15% in April, despite benchmark short-term government yields rising by 2 basis points (bps) on average. Average daily trading volume rose to PHP14.92bn from March's PHP13.83bn with trades mostly seen on the short-end (6-month to 1-year papers) and belly (5-year papers) of the curve.

The Bureau of the Treasury (BTr) held four Treasury Bill auctions in April. Demand for the short-end of the curve was still healthy as all tenors across all auctions were more than twice oversubscribed throughout the month. Preference for lower duration securities prevailed as average rates for the final auction were awarded at 1.140%, 1.558% and 1.901% for the 91-, 182- and 364-day papers, respectively. Towards month-end, the May auction schedule was released with four FXTN issuances (3-, 5-, 7-, and 10-year tenors) and four Treasury Bill auctions amounting to PHP200 billion.

March headline inflation rose to a 6-month high of 4.0% year-on-year, as food, utilities and transportation costs rose in line with global fuel prices as the Russian-Ukraine tensions persisted. The figure was at the higher end of the Bangko Sentral ng Pilipinas' (BSP) target range of 2-4% for the year. The central bank had earlier warned that with fuel costs rising as a consequence of geopolitical tensions, Philippine inflation could breach the target before the end of the second quarter. The BSP shall continue to monitor emerging risks to the outlook for inflation and growth, and adjust policy settings as needed.

Fund Performance. The Fund returned 0.00% during the month, below its benchmark by 8 basis points.

Fund Strategy. The Fund continues to maintain its holdings in short duration government securities. Expectations of rising rates moving forward may provide an opportunity for better yielding investment outlets.
