OUTLOOK AND STRATEGY

Market Review. The Philippine Stock Exchange Index (PSEi) finally broke from a two-month decline after posting a 1.9% climb for the month of April. The rally was supported by decelerated inflation prints and a strong start of the 1st quarter earnings results. Local Philippines inflation in March registered at 7.6% or slower than 8.6% mark in February. Meanwhile, the US Consumer Price Index dropped to 5% in March, lower than 5.1% consensus estimate and 6% figure in February. Adding to the positive sentiment is the strong start of the 1Q 2023 earnings reports with banking names at the forefront as BDO and BPI posted better-than-expected results. The PSEi closed at 6,625.08 in April.

In terms of activity, the PSEi was less active in April with the Average Daily Turnover coming in only at US\$87.5 million or 33.2% lower compared from the prior month. This can be attributed to the number of non-working Holidays for the month which kept market players on the sidelines. Meanwhile, in terms of foreign flows, foreigners turned "Net Buyers", at US\$34.3 million worth of inflows. However, on a year-to-date (YTD) basis, net foreign outflows are still hefty at US\$484 million.

For the individual stock performances, the top three index gainers for the month are as follows: MPI (+20.38%), AEV (+13.12%) and BDO (+12.06%). Meanwhile, the bottom three index performers include: SCC (-16.54%), TEL (-15.21%) and DMC (-14.70%).

The BPI Government Bond Index returned 0.57% in April as the benchmark government yield curve flattened with the short-end of the curve rising and the long-end falling. Average daily trading volume rose to PHP15.42 billion from March's PHP14.83 billion with trades mostly seen on the long-end of the curve.

The Bureau of the Treasury (BTr) held four FXTN auctions in April. The 3-year FXTN 7-62, 9-year FXTN 10-69, and 7-year FXTN 7-69 reissuances were all fully awarded at average yields of 5.883%, 6.142%, and 6.012%, respectively. The first 13-year FXTN 13-1 primary issuance was partially awarded at a coupon rate of 6.250%. Towards the end of the month, the BTr released the May auction schedule with five Treasury Bill auctions and four FXTN issuances (6-, 9-, 13-, and 7-year tenors) each with an offer size of PHP25 billion.

In the local space, March inflation fell to a six-month low at 7.6% year-on-year, lower than the 8.6% in February. The decline in the March figure can be attributed to slower food, transport, and utility inflation. Despite easing headline inflation, second-round effects have driven higher price pressures for restaurants and personal services, pushing the core inflation to 8.0%. BSP officials reiterated that they remained prepared to adjust policy settings as needed, adding that easing inflation would give them more flexibility moving forward.

Fund Performance. The fund returned 0.25% in April, underperforming its benchmark by 3 bps. Year-to-date, it outperformed the benchmark by 5 basis points with a return of 1.47%.

Fund Strategy. The Fund looks to maintain its underweight duration position given expectations of rising interest rates moving forward. It will likewise continue to hold high quality corporate bonds for yield enhancement. Though inflation has exceeded the government's target range, the BSP remains vigilant in monitoring supply side pressures and potential second-round effects. Volatility will persist in the global space, and the portfolio will be actively managed to take advantage of this. Investors in a bond fund must be prepared to withstand volatility as higher investment value is typically achieved over the medium to long term.

For equities: The Fund will continue to be defensive as volatility is expected to persist across financial markets. Stubbornly high global inflation is keeping interest rates elevated. However, we will take advantage of the volatility in buying quality names on dips and sell on excessive market rallies.

LIST OF PROSPECTIVE INVESTMENTS
