## OUTLOOK AND STRATEGY

**Market Review.** The JP Morgan Asia Credit Index (JACI) Philippines returned 1.59% in March as Philippine dollar-denominated bonds tracked movements in US Treasuries.

Global bonds rallied in March as investors adopted a flight-to-safety stance amid concerns over the health of the banking sector. The US Federal Reserve responded swiftly to the closure of Silicon Valley Bank, ensuring depositors that all their deposits would be protected. Central banks across the globe likewise reiterated their commitment to provide liquidity and stabilize markets as needed. During its March Federal Open Market Committee (FOMC) meeting, the Fed opted to hike rates by another 25 basis points, citing the continued need to cool inflation even as the new challenge of maintaining financial stability emerged. Both US CPI and employment data released during the month continued to support the case for further policy tightening. For the month, the 10-year US Treasury yield fell by 45 basis points to close at 3.47%.

In the local economic space, inflation for the month of February settled at 8.6% year-on-year, marginally lower than the 8.7% in January. Though the figure was lower than market expectations, prices of food and fuel continued to be affected by supply-side pressures. Consequently, the Bangko Sentral ng Pilipinas (BSP) decided to raise benchmark rates by 25 basis points during their Monetary Policy meeting held March 23. BSP officials reiterated that they remained prepared to adjust policy settings as needed, given persistently high CPI levels, as well as central bank tightening measures globally.

**Fund Performance.** The Fund returned 1.29% for the month, underperforming its benchmark by 30 basis points. Year to date, the fund returned 2.87%, above the benchmark by 1 basis point.

**Fund Strategy.** The Fund looks to gradually increase its duration position as yields are seen to peak in the near term. Global events remain likely to add volatility. Investors in a bond fund must be prepared to withstand volatility as higher investment value is typically achieved over the medium
