CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The BPI European Equity Feeder Fund is for investors who:

- Are at least classified as aggressive based on their risk profile.
- Have an investment horizon of at least five (5) years.

Participation in the Fund shall be open to Participants with legal capacity to contract and who are not considered US persons under the US securities and tax laws, subject to the other conditions, rules or provisions stated in the Plan Rules and those established by the Trustee. KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Market/Price Risk: Investors are exposed to adverse changes in the prices of large cap stocks in the Eurozone, which may be brought about by adverse market conditions, unfavorable company earnings and valuations, and negative developments in the political and economic conditions of countries where investee companies are domiciled.

Liquidity Risk: Investors are exposed to the risk of loss due to the target fund's inability to convert security holdings to cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price due to limited participants in the market, low trading volumes, market disruptions, among others.

Country Risk: Investors are exposed to the risk of loss arising from negative developments in the political, economic and social conditions of countries, primarily in Europe, which may adversely affect the value of the feeder fund.

FX Risk: Investors are exposed to the risk of loss from a decline in the market value of the target fund when the market value of EUR denominated equity securities held by the target fund are translated to USD.

The Fund's investment outlets undergo proper screening and evaluation in accordance with the Trustee's accreditation process. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

OUTLOOK AND STRATEGY

Market Review. European equities rose in March. The eurozone economy improved as the HCOB Flash Eurozone Composite PMI rose for the fifth month in a row to 49.9, slightly below an expansionary level, indicating a small decline in the output of goods and services. Both service and manufacturing sectors showed modest improvement, leading to an increase in employment. The European Central Bank (ECB) and several other central banks left interest rates unchanged and signaled potential cuts in the near future, while Switzerland's central bank became the first major central bank to ease policy. Inflation in the eurozone moderated slightly in March, with headline inflation at 2.4% and core inflation at 2.9%, bolstering expectations that the ECB will cut interest rates by the summer. The MSCI Europe Index returned 3.9% over the month, with real estate and financials as the top performing sectors.

Fund Performance. The fund returned 4.54% for the month, outperforming the benchmark. Strong selection within industrials, financials, and consumer discretionary helped performance.

Fund Strategy. Despite expectations of potential rate cuts in 2024, central banks in Europe continue to signal that interest rates may remain elevated. We continue to see inflationary stress, recessionary risk, and geopolitical risks as key concerns for the region. We are monitoring how countries are dealing with recessionary risks, keeping an eye out for the impact on real estate and financials, and the current situation in Ukraine and the Middle East and how the impact of energy and gas supplies will affect the economic situation in Europe. The fund will continue to invest in companies with compelling structural growth, solid competitive positioning, and attractive valuations, which can potentially lead to higher returns and help mitigate downside risk given the current market environment.
