- Have an investment horizon of at least three (3) years.

### KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

**Market/Price Risk:** Investors are exposed to adverse changes in the prices of foreign currency denominated fixed income collective schemes (target funds), due to a rise in interest rates as a result of adverse market conditions, unfavorable developments in the political and economic conditions of countries where the underlying securities of the target funds are issued or traded, or other issuer-specific factors.

**Liquidity Risk:** Investors are exposed to the risk of loss due to the inability of the target funds to convert security holdings to cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price due to limited participants in the market, low trading volumes, market disruptions, among others.

**Country Risk:** Investors are exposed to the risk of loss arising from negative developments in the political, economic and social conditions of the focus countries of the target fund which may adversely affect its value.

**FX Risk:** Investors are exposed to the risk of loss from a decline in the fund value when the market value of foreign currency denominated target funds are translated to USD.

The Fund's investment outlets undergo proper screening and evaluation in accordance with the Trustee's accreditation process. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

## OUTLOOK AND STRATEGY

**Market Review.** The Bloomberg Global-Aggregate Bond Index (Unhedged USD) returned 0.26% in December. Cooling U.S. inflation and mixed labor data provided the Federal Reserve room to ease policy. On December 10, the Fed cut rates by 25 basis points, signaling a more accommodative stance. However, strong demand at mid-month U.S. Treasury auctions pushed long-term yields higher, resulting in a steeper curve, short-term yields declined while long-term yields rose.

Across global fixed income markets, yield movements were mixed. Government Bonds (Govies) and Emerging Market (EM) rates generally rose, while Investment-Grade (IG) corporates and High Yield (HY) spreads tightened. In Asia, Japan's 10 yr JGBs yield jumped 27 bps to 2.07%, a 17 year high, after the Bank of Japan (BoJ) raised rates by 25 bps to 0.75%, ending decades of ultra-dovish policy. In Europe, UK 10-year Gilts edged up 3 bps to 4.48%, while German 10-year bunds rose by 17bps to 2.86%, reflecting ECB's neutral stance, global yield pressures, and geopolitical sentiment. Emerging market debt posted positive returns, with hard-currency EM debt up 0.7% and local-currency EM debt up 1.5% in USD terms. In the Philippines, dollar-denominated bond yields rose and the curve steepened, tracking U.S. Treasury movements. The JP Morgan Asia Credit Index – Philippines returned 0.39% for the month.

**Fund Performance.** The fund returned 0.52% in December, outperforming the benchmark by 8 basis points. Security selection within the fund helped improve performance.

**Fund Strategy.** We expect major structural trends in sustainability, such as increasing market share of electric vehicles and record installation of wind turbines and solar panels, to continue. The ongoing Russia-Ukraine war, has resulted in the world, particularly Europe, determined to reduce their reliance on traditional sources of energy such as oil in gas, requiring large investments in renewable energy in the coming years. In addition, we continue to see support for green technologies through government policies across the globe. We believe that strong ESG companies are likely to generate positive financial performance over time as investing in sustainability can deliver higher growth and returns through innovation, higher operational efficiency and better risk management.
