KEY RISKS AND RISK MANAGEMENT

Market/Price Risk: Investors are exposed to adverse changes in the prices of foreign currency denominated fixed income instruments due to a rise in interest rates as a result of adverse market conditions, unfavorable developments in the political and economic conditions of countries where the underlying securities of the target fund are issued or traded, or other issuer-specific factors.

Liquidity Risk: Investors are exposed to the risk of loss due to the target fund's inability to convert security holdings to cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price due to limited participants in the market, low trading volumes, market disruptions, among others.

Interest Rate Risk: Investors are exposed to adverse changes in the prices of fixed income securities of the target fund due to a rise in interest rates, which generally causes fixed income security prices to decline. Factors/ events that may lead to a rise in interest rates include adverse market conditions, issuer-specific factors/events and/or negative developments in political and economic conditions.

Country Risk: Investors are exposed to the risk of loss arising from negative developments in the political, economic and social conditions of the focus countries, which may adversely affect the value of the feeder fund.

FX Risk: Investors are exposed to foreign exchange risk when the underlying investments of the target fund are in different currencies from the base currency of the fund. For Class P unit investors, additional foreign exchange risk is brought about by the Fund being denominated in Philippine Pesos. The Fund will not hedge foreign exchange exposure.

The Fund may use financial derivatives to hedge the portfolio against market and credit risks, while the Target Fund may use financial derivatives for efficient portfolio management provided, that the financial derivatives shall not be extensively used as an investment strategy of the Target Fund, and its risk level must align with the overall objective and risk profile of the Fund.

OUTLOOK AND STRATEGY

Market Review. In July, global fixed income assets performed poorly as bond yields rose, driven by stronger-than-expected U.S. labor data, accelerating inflation, and the Federal Reserve's decision to hold its policy rate steady. The US economy added 147,000 jobs in June, surpassing market expectations of 106,000, while inflation climbed from 2.4% in May to 2.7% in June, reflecting upward pressure from recently imposed tariffs.

The US macroeconomic backdrop supported the Fed's decision to maintain its policy rate at 4.25%–4.50%. Fed Chair Jerome Powell emphasized that the labor market's resilience allows the central bank to wait for greater clarity on the inflationary impact of tariffs. Although some trade agreements were reached, higher tariffs are still scheduled to take effect on August 1.

In the Philippines, dollar-denominated bond yields showed mixed movements, with shorter tenors increasing and longer tenors declining. The JP Morgan Asia Credit Index – Philippines delivered a monthly return of 0.75%, supported by stable interest income.

Fund Performance. For the month, Class A returned -0.38%, while Class P returned 3.13%.

Fund Strategy. The fund will continue to invest at least 90% of its assets in the target fund.
