BENCHMARK INFORMATION

Name: The PSEi Total Return Index (PSEi TRI)

Date of Change: January 2, 2025

Description and Reason for Change: The Philippine Stock Exchange Index or PSEi is the main index of the Philippine Stock Exchange. The PSEi is a free float-adjusted market capitalization-weighted index of the 30 largest and most active common stock. The PSEi Total Return Index (PSEi TRI) covers both price performance and income from dividend payments by reinvesting cash dividends back to the PSEi according to each constituent's respective market capitalization weightings. The change in the fund's benchmark from PSEi to PSEi TRI is mainly to satisfy the characteristics of a valid benchmark for a UITF in the BSP Circular No. 1178, and to conform with the Global Investment Performance Standards (GIPS) requirement for firms to select an appropriate total return benchmark when available.

Information about the benchmark may be accessed through Philippine Stock Exchange <https://www.pse.com.ph/>. Alternatively, participants may request information from BPI Wealth at bpiwealth.com.ph.

OUTLOOK AND STRATEGY

Market Review. April 2025 was a stable month for the Philippine local fixed income market, characterized by mixed movements in yields and strong investor demand for government securities. The market navigated through global economic uncertainties and local fiscal policies effectively. The BPI Philippine Government Bond Index returned 0.30% for the month as rates crept higher by 3 bps on average, mostly on the long end of the curve. Both domestic and international factors, including central bank policies, inflation trends, and geopolitical developments affected yield movements for the period. The Bureau of Treasury (BTr) initially announced 4 FXTN auctions for the month. The first two were re-issuances of 5-year FXTN 7-70 and 7-year FXTN20-17, both fully awarded at average rates of 5.908% and 5.986%, respectively. The 15-year auction scheduled in the last week of April was cancelled to accommodate for the jumbo 10-year FXTN issuance. The government raised a total of PHP 300 billion of FXTN 10-73 with the coupon rate set at 6.375%. Demand for government securities remained strong, particularly for medium-term bonds. On the other hand, short-term rates saw an increase due to position trimming to fund the settlement of new 10-year paper. Local inflation slowed further to 1.8% in March 2025, down from 2.1% in February. This easing inflation supported stable bond prices. The Bangko Sentral ng Pilipinas (BSP) eased its policy rate by 25 basis points bringing the benchmark rate to 5.50%. Moreover, the BSP reduced its risk-adjusted inflation forecast to 2.3% (from 3.5%) for 2025 and 3.3% for 2026.

The Philippine Stock Exchange Index (PSEi) rose for the third month in a row despite the early sell-off that transpired following the effectivity of US President Donald Trump's tariffs on April 2 and the succeeding announcement of reciprocal tariffs. Initially, the index sank to a 52-week low in the 5,800-level but managed to bounce back after the US President decided to take a "pause" on the tariffs, which lifted sentiment and supported a relief rally. Moreover, a slew of domestic macro-economic developments further propelled the recovery, these include March inflation coming out lower-than-expected at 1.8%, a 25 basis-point rate cut by the Bangko Sentral ng Pilipinas (BSP), as well as the continued appreciation of the Philippine peso. Given those, the PSEi climbed 2.82% to 6,354.99 in April. In terms of trading activity, the Average Daily Turnover grew by 3.5% to Php5.80billion in April. In terms of foreign activity, foreigners turned net sellers, registering US\$54 million amidst the tariffs pronouncements. Top foreign sold stocks were ICT (US\$50.1 million), SMPH (US\$16.2 million), and JFC (US\$11.80 million). Foreign participation remained at 55% in March. On a per stock basis, the top three index gainers for the month include: URC (+18.21%), BLOOM (+16.78%) and PGOLD (+13.70%). Meanwhile, the bottom three performers were: GLO (-12.17%), ACEN (-12.17%) and DMC (-7.67%).

Fund Performance. The Fund registered a gain of 1.13% in April, below the benchmark by 4 basis points. Year-to-date, the Fund registered a gain of 1.76%, above the benchmark by 68 basis points.

Fund Strategy. The Fund looks to gradually increase its duration position as interest rates are expected to fall over the next few months. Local inflation has settled within the BSP's target in the past months and is expected to be manageable. After easing its policy rates by 75 basis points in 2024, the BSP remains vigilant in monitoring inflation figures before easing rates further. Volatility may persist in the near term driven by global factors, and the portfolio will be actively managed to take advantage of this. Investors in the bond fund must be prepared to withstand volatility as higher investment value is typically achieved over the medium - to - long term horizon. As for Equities, the Fund will be opportunistic on market dips as volatility from the global front remains given lingering uncertainties on US tariffs and escalating geopolitical tensions. The preference is for companies with leading market capitalization, good fundamentals and high-dividend paying stocks.
