OUTLOOK AND STRATEGY

Market Review. Philippine government bond prices declined in March as yields in the market moved higher. On average, bond yields increased by about 81 basis points, with bonds maturing in 3 to 10 years seeing the largest increases. The rise in yields was mainly driven by concerns about higher inflation following a sharp increase in global oil prices. Locally, fuel prices went up significantly during the month, with gasoline prices rising from Php53 to Php93 per liter and diesel prices from Php61 to Php119. Near the end of March, the Bangko Sentral ng Pilipinas held an unscheduled meeting and decided to keep policy interest rates unchanged, citing concerns about economic growth despite inflation risks. Investor sentiment was further affected by the weakening of the Philippine peso against the US dollar, which moved from Php57.67 to Php60.75 during the month. As a result, foreign investors continued to reduce their holdings of Philippine government bonds, with net outflows amounting to Php81.9 billion in March. During the month, the Bureau of the Treasury raised Php55.2 billion through its regular bond auctions, which was below its Php108 billion target. This was due to the government choosing to accept fewer bids as bond yields continued to rise.

The Philippine Stock Exchange Index (PSEi) suffered a sharp correction in March, mainly due to the heightened geopolitical tensions in the Middle East following the outbreak of open hostilities involving the United States and Israel against Iran. This development triggered a broad risk-off sentiment across global financial markets. Global commodity markets reacted swiftly, with oil prices spiking above US\$100 per barrel. This surge posed heightened risks for the Philippines, given the country's reliance on imported energy. In response to the worsening macroeconomic backdrop, the Bangko Sentral ng Pilipinas (BSP) adopted a more cautious monetary stance, revising its inflation forecasts upward to reflect the pass-through effects of higher fuel prices. Consequently, the Philippine peso depreciated sharply, closing the month at Php60.748 per US dollar, compared with Php57.665 per US dollar previously. For the month of March, the PSEi closed at 5,948.94 or down by 10.02% month-on-month. In terms of market activity, Average Daily Value Turnover stood at Php6.47 million, in-line with prior month figure. Meanwhile, foreigners continue to exit the market after registering US\$231 million worth of net selling for this month. On a per stock basis, the top three index gainers for the month include: SMC (+5.59%), ACEN (+4.98%) and DMCI (+3.42%). Meanwhile, the bottom three performers were: ALI (-22.78%), GTCAP (-22.39%) and URC (-18.38%).

Fund Performance. The fund returned -1.67% in March, below the benchmark by 11 basis points. Year-to-date, the Fund registered a loss of 0.10%, below the benchmark by 32 basis points.

Fund Strategy. The Fund will continue to be defensive given heightened volatility from geopolitical tensions. The Fund's preference is for companies with leading market capitalization, clear earnings growth drivers, dividend-paying and high-yielding. For the fixed income portion of the fund, the Fund looks to maintain a nimble portfolio position to take advantage of any opportunities as interest rates are seen to increase over the next few months. Local inflation is seen to be affected by ongoing geopolitical tensions in the Middle East and may breach the BSP's targeted range near-term. Investors in a balanced fund must be prepared to withstand volatility as higher investment value is typically achieved over the medium to long term.
