KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Market/Price Risk: Investors are exposed to adverse changes in the prices of foreign currency denominated fixed income instruments of the target funds due to a rise in interest rates as a result of adverse market conditions, unfavorable developments in the political and economic conditions of countries where the underlying securities of the target funds are issued or traded, or other issuer-specific factors.

Liquidity Risk: Investors are exposed to the risk of loss due to the inability of the target funds to convert security holdings to cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price due to limited participants in the market, low trading volumes, market disruptions, among others.

Interest Rate Risk: Investors are exposed to adverse changes in the prices of fixed income securities of the target funds due to a rise in interest rates, which generally causes fixed income security prices to decline. Factors/ events that may lead to a rise in interest rates include adverse market conditions, issuer-specific factors/events and/or negative developments in political and economic conditions.

Credit/ Default Risk: Investors are exposed to the risk of loss due to the failure of the borrower/debt issuer to make timely interest and/or principal payments on its deposit liabilities, loans, bonds or other debt instruments due to a deterioration in the borrower's/issuer's financial condition or external factors and events that may affect its ability to repay financial obligations such as negative developments in political and economic conditions.

FX Risk: Investors are exposed to the risk of loss from a decline in the market value of the target fund when the underlying securities of the target funds are translated to USD.

The Fund's investment outlets undergo proper screening and evaluation in accordance with the Trustee's accreditation process. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

BENCHMARK INFORMATION ⁵

Name	Description and Key Characteristics
MSCI All Country World Index Net Total Return USD Index	The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance for the full opportunity set of large- and mid-cap stocks across 23 developed and 24 Emerging Markets. With 2,757 constituents, the index covers approximately 85% of the global investable equity opportunity set. The index is based on the MSCI Global Investable Market Indexes (GIMI) Methodology – a comprehensive and consistent approach to index construction that allows for meaningful global views and cross regional comparisons across all market capitalization size, sector and style segments and combinations. This methodology aims to provide exhaustive coverage of the relevant investment opportunity set with a strong emphasis on index liquidity, investability and replicability. The MSCI Total Return Indices measure the market performance, including price performance and income from regular cash distributions (cash dividend payments or capital repayments). MSCI's Daily Total Return (DTR) methodology reinvests regular cash distributions in indices on the ex-date of such distributions.
Bloomberg Barclays Global Aggregate Bond Index (Unhedged)	The Bloomberg Global Aggregate Index is a flagship measure of global investment grade debt from twenty-eight local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. A component of the Multiverse Index, the Global Aggregate Index was created in 2000, with index history backfilled to January 1, 1990.

More details about the benchmark may be accessed through Bloomberg and the website of MSCI. Alternatively, participants may request information from BPI Wealth at bpwealth@bpi.com.ph.

OUTLOOK AND STRATEGY

Market Review. The Bloomberg Global Aggregate Bond Index (Unhedged USD) returned -3.07% in March. Performance during the month was influenced by geopolitical developments in the Middle East, movements in energy prices and changes in central bank policy expectations, which drove market moves across both rates and credit sectors. Against this backdrop, government bond yields rose for much of March as expectations for near-term interest rate cuts were pushed back. U.S. Treasuries initially weakened before recovering later in the month on early signs of easing geopolitical tensions. The U.S. 10-year Treasury yield ended the month around 4.30%, modestly higher than at the start of March. Investment-grade credit held up relatively well despite higher rates, supported by strong corporate fundamentals, although returns were slightly negative. High yield bonds were more affected by market uncertainty, with wider spreads weighing on performance, even as income levels remained attractive. Emerging market bonds faced the most pressure, particularly in local-currency markets, as a stronger U.S. dollar and higher oil prices led to currency weakness and investor outflows. Overall, March reflected a more cautious tone across global fixed income markets, with investors prioritizing stability amid ongoing uncertainty.

Global equities declined in March, reversing earlier gains as geopolitical tensions escalated following U.S.–Israel strikes on Iran. The MSCI World Index fell in U.S. dollar terms, with risk sentiment deteriorating amid higher energy prices, rising inflation expectations, and a broad flight to safety. Losses were more pronounced outside the United States. European and Asia Pacific equities came under pressure. European markets weakened on energy supply concerns and rising input costs, while tighter financial conditions further weighed on the outlook. Asia Pacific equities also declined, with both developed and emerging markets affected by energy import exposure and currency pressures. U.S. equities moved lower but showed relative resilience compared to other regions, supported in part by energy sector strength and defensive positioning. Nonetheless, market breadth remained weak, with most sectors ending the month in negative territory. Emerging market equities were among the hardest hit, particularly in Asia, as higher oil prices and risk aversion drove capital outflows. Energy was the primary outperforming sector globally, while cyclical and growth segments lagged amid a repricing of inflation and interest rate expectations.

Fund Performance. The fund returned -6.17%, lagging the benchmark by 103 basis points. Security selection within the fund helped performance.

Fund Strategy. The Fund looks to maintain a nimble portfolio position to take advantage of any opportunities as global inflation is seen to increase over the next few months as an effect of the ongoing geopolitical tensions in the Middle East. Volatility may persist in the near term driven by global factors, and the portfolio will be actively managed to take advantage of this. Investors in the bond fund must be prepared to withstand volatility as higher investment value is normally achieved over the medium to long term horizon.
